

THE SIMS 2 COLLECTION CREATOR PROGRAM MANUAL

Version: 1.0

Copyright 2006 DJS Sims and the Sims Programming Group

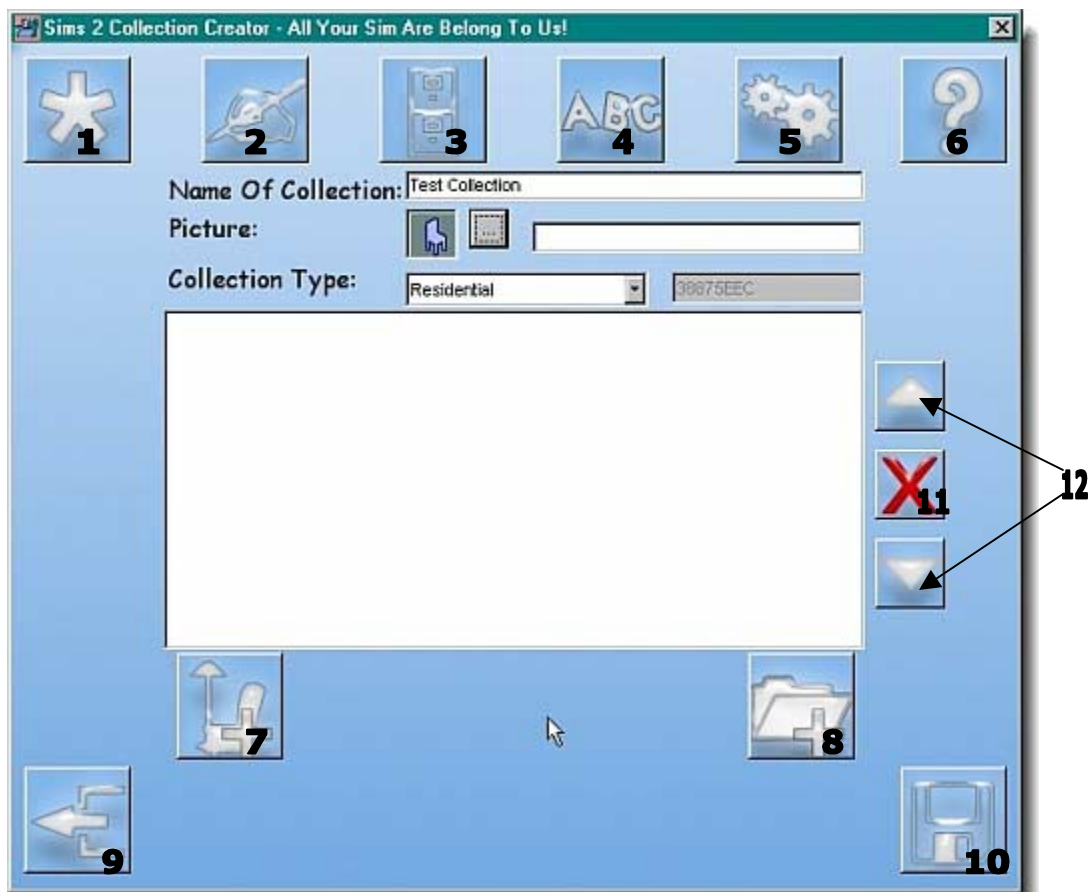

<http://www.djssims.com>

Installation Information:

If you download the installer: extract the EXE file from the zip and run it. It will place all the program files in their proper places, and create a shortcut for you.

If you download the "no installer" version: extract the zip and it's contents into the folder of your choice, and then launch the "Sims2CollectionMaker.exe" file to start the program.

Program Overview:

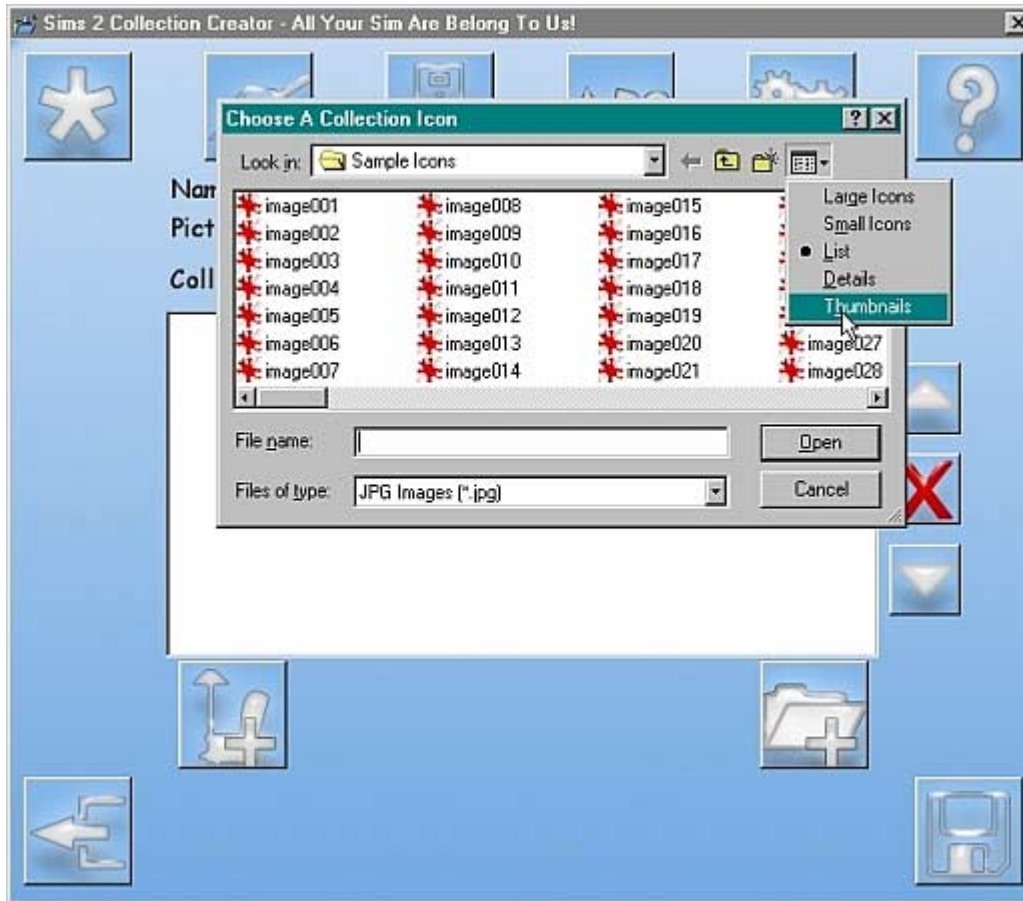

Button 1. Make a New Collection File:

Once you click on this, you will get a pop-up which states "You're all set to make a new collection!" Click OK.

Enter a name for your collection.

Pick a picture, by clicking on the three dots (...). You can choose your own pictures, if you do please note the warning on proper size and format that pops up.

Tip: Be able to see images of the collection icons so it is easier to pick which one you want, click on the view menu and choose Thumbnails.

Choose a collection type, either Residential or Community.

Button 7: Choose an object to add to the collection

Navigate to your Downloads folder, usually C:\My Documents\EA Games\The Sims 2\Downloads. Choose the package files you wish to add to the collection file.

How do I know which package files to add?

This is where being organized is essential. If you have not separated your downloads into subfolders or have not kept a picture of the

download with the package file, then you are left to guess. You can use Clean Installer (<http://sims2pack.modthesims2.com/index.php>) to separate downloads into basic categories.

Once you pick a package file, a details screen will come up. Click the checkmark to add the package file to your collection.

Note: You can only add OBJECTS to a collection. This is by Maxis design. To see the recolors of an object, you must add the mesh first.

When you are done, click "Save Current Collection File" (Button 10).

Button 8: Choose a Directory to add Batch Files to the Collection

If you have sorted your downloads you can add all the package files to a collection at once.

Navigate to the folder you want, for instance C:\My Documents\EA Games\The Sims 2\Downloads\Buy Mode - Decorative - Vases. This is the folder I keep all my vase package files in. A Window will pop up with all the package files in that folder. Click the check mark to add them to the collection.

You can change the order of the package files within the collection using the up/down buttons. (Buttons 12)

When you are done, click "Save Current Collection File" (Button 10).

Button 2. Edit an Existing Collection File

Navigate to the collection file you wish to edit usually C:\My Documents\EA Games\The Sims 2\Collections. You can rename the collection, change the icon, change the collection type and sort or remove items from the collection.

When you are done, click "Save Current Collection File" (Button 10).

Button 3. Back up your existing collections

When you press this button, your collections will be backed up and you will see a message which says:

Collections backed up! You can find them in this directory: C:\Program Files\Sims 2 Collection Maker\Backups.

4. Sort your collections so they will show up in alphabetical order in the game.

It is very annoying to make collections files and have Stoves show up before Counters, for instance. This auto sorts your collections files by name. Use this feature after you have created all your collections.

Navigate to your collections folders usually C:\My Documents\EA Games\The Sims 2\Collections.

The sort takes awhile to complete, so be patient!

Button 5. Option Menu

Choose the directory where you collections files are and turn off warning dialogs.

Button 6. About This Program

Button 9. Exit The Program
